

Peomiz Platform Review & Improvement Plan

Prepared by: Jaipreet Singh

Role: SEO Analytics, Tracking & Reporting Intern

Date: 12 June 2026

Objective

To evaluate Peomiz's website, mobile applications, and digital presence from an analytics and customer experience perspective, and identify opportunities for improvement aligned with my role in analytics and reporting.

Positive Observations

1. Transparent Pricing Structure

One of the strengths of the platform is the visibility of standardized pricing for various services. This transparency helps reduce customer uncertainty, improves trust, and assists users in making informed decisions without requiring multiple interactions.

2. Functional Customer Application

The customer application is generally easy to use and provides access to a broad range of services within a single platform. The booking journey appears straightforward and intuitive.

3. Wide Service Coverage

The platform offers multiple categories of services, enabling users to address different household needs through a single ecosystem.

Areas for Improvement

1. Mobile Website Experience

While the desktop website experience is satisfactory, the mobile version could be improved. Certain layouts and interface elements appear less polished and could benefit from better responsiveness and optimization for smaller screens.

As a significant portion of users are likely to access the platform through mobile devices, improving the mobile experience may positively influence user engagement and conversion rates.

2. Customer App Navigation

After selecting categories such as Spa or Appliance Services, the subsequent screens display relatively small icons across the page. Using larger visual cards, grouped layouts, or more intuitive category designs could improve usability and service discoverability.

3. Social Media Activity

The LinkedIn and Facebook pages appear to have limited recent activity. More consistent posting of educational content, service updates, customer stories, and engagement campaigns could strengthen brand visibility and credibility.

4. Customer Testimonials and Trust Signals

Customer testimonials displayed on the platform appear concentrated within a relatively narrow time period. Displaying a broader range of recent and verified customer reviews may further enhance authenticity and customer confidence.

Analytics and Reporting Recommendations

To strengthen data-driven decision-making, the following initiatives are recommended:

Tracking and Measurement

- Implement and validate Google Analytics 4 (GA4) tracking for key user actions.
- Configure Google Tag Manager (GTM) to capture important conversion events such as:
 - Booking completions
 - Form submissions
 - Call button clicks
 - WhatsApp interactions

Dashboard Development

Develop weekly and monthly dashboards to monitor key performance indicators (KPIs), including:

- Organic Traffic
- Leads Generated
- Bookings Completed
- Conversion Rate
- Landing Page Performance
- Top-Performing Pages
- Underperforming Pages

Funnel Analysis

Track user journeys from website visits to booking completion to identify stages where users drop off and opportunities for optimization.

Expected Outcomes

Implementation of the above recommendations may contribute to:

- Improved mobile user experience.
 - Enhanced customer trust and credibility.
 - Better visibility into customer behavior and conversion patterns.
 - Faster identification of underperforming pages and campaigns.
 - More effective, data-driven decision-making through actionable reporting.
-

Conclusion

Peomiz demonstrates a strong foundation through transparent pricing and a functional service platform. By refining the mobile experience, strengthening digital engagement, improving trust signals, and implementing robust analytics practices, the platform can further enhance customer experience and support sustainable growth.
